

CAN YOU CONTROL THE ACCESS TO YOUR BUILDING?

Do you know who is in your office building or school? Can you control access for all entry points in order to improve security for your people, products and equipment? Today, security is a critical aspect of all of our lives and photo IDs are one part of a solution, one that can help to minimize vulnerabilities due to lapses in security.

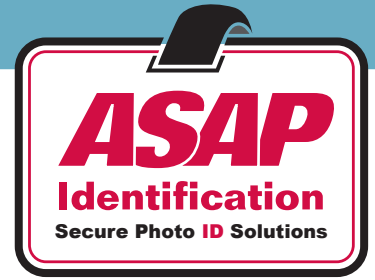

Photo IDs offer security and convenience using visual identification

Photo IDs coupled with Proximity cards, bar codes, encoded magnetic stripes and/or smart cards (both contact and contactless) help manage time and attendance tracking, payroll processing, library checkout, locking/unlocking of PCs, cashless vending, ticketless admittance to activities and more.

Proximity cards, with or without photos, can also be used for managing access to buildings and facilities such as health clubs, hospitals, construction sites and small and large office buildings.

Card encoding provides solutions for more complex requirements

ASAP Identification Security, Inc. sells and provides service on a wide range of secure photo ID systems including printers by Fargo, Evolis, Zebra and Datacard. We also sell and support card design software by Jolly Tech, Asure ID, NFive and Evolis and accessories (cameras, badge holders and lanyards) as well as engraved identification tags when less security is required. We can help you select the photo ID system that meets your needs, install it and support it.

ASAP Identification serves small and large businesses of all industries including healthcare, education, government, and private clubs. **Let us help find the right ID system and provide support for all your identification needs.**

Card printing services when an ID system purchase is not practical

We can provide photo ID management for those smaller businesses or events where in-house photo ID management is not needed. We offer custom card design and production services to include logos, names, photos, titles, bar codes and any other items needed on the card. We can also produce name badges, key FOBs and gift or loyalty cards for your organization.

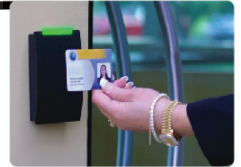

ASAP will manage the design and production process from start to finish and our turn around time regularly receives high praise from our customers.

ASAP Identification Security offers technical support and service on Fargo, Zebra and Datacard printers.

Photo ID systems offer a layer of security for your organization

From basic photo IDs to technically sophisticated smart cards, identification systems help your organization meet your security needs. Card printers, smart cards, card design software, cameras and badge accessories can be integrated to create simple and effective visual security.

Card printers – Depending on the needs of your organization, there are many choices available including single and dual-side printers, direct to card and reverse transfer (high definition) printing technology, encoding and lamination options. For some, an affordable single sided direct to card printer may meet your needs for basic visual security by offering an ID to validate that an individual belongs in your organization. For others, a more sophisticated system with Proximity and/or smart card encoding and secure laminates is needed to control access and create tamper-proof IDs.

Card design software – There is a wide range of card design software packages depending on the needs of the organization from basic ID creation to complex connections to databases for employee authentication. We offer several off-the-shelf solutions for your card design needs.

Capturing Devices – As with the ID printers and software, there is also a wide range of camera, biometric scanners and accessory options available. This includes high-end video capture devices, in photo capture software to interface digital cameras to card design software and basic webcam solutions. In addition, there are signature and biometric scanners to support smart card applications.

Accessories – Finally, there are the accessories needed to display your organizations visual identity including standard and custom lanyards, basic and personalized badge reels, a wide range of badge holder options and simple straps.

Technical services support your ID system quickly and effectively

Technical support – ASAP supports all the products sold including ID printers, card design software and accessories. We have local, on-site service as well as depot services if that is more convenient. We also have a range of loaner printers available if needed while your printer is repaired.

Photo ID and name badge printing services

ASAP offers a service bureau for custom card printing of your photo IDs and name badges. This is an ideal solution for organizations that cannot purchase the ID equipment or for those that would prefer to outsource this task. The process is simple:

Design – We will discuss your card design with you and, after an initial conversation, we will produce both electronic and hard copy samples for your approval.

Proof – Once the sample is accepted and approved, we are ready to print.

Data Collection – You collect your ID information, photos (JPG or BMP) and send to ASAP (email, FTP or flash drive). If you need help in data capture, we can support this as well.

Print and Ship – We print your profession ID cards (1 or many) and ship to your attention. Most IDs are printed within 24 hours of order date and remakes or additional IDs are also processed quickly for high customer satisfaction.

ASAP Identification Security, Inc., based in Indianapolis, Indiana, was started in 1982 by Tom Brown. His initial focus was on engraving, name stamps and name tags, but ASAP ID has expanded into photo identification solutions for businesses, schools and other organizations. Tom was joined in 2006 by his daughter, Sheila Brown, in this business endeavor making ASAP Identification Security a 2nd generation family business, women owned and operated and committed to quality solutions, superior product support and consistent and responsive customer service.

Certified WBE with the State of Indiana, City of Indianapolis and WBENC.
